#### Percurso

#### Aula 1

Instalando e executando Java

#### Aula 2

Utilizando Java 11

#### Aula 3

Usando Intellij para desenvolvimento Ja

#### Aula 4

Empacotando aplicações Java

#### Requisitos

- Distribuição Linux (Ubuntu, Mint, etc)
- Conhecimentos comandos básicos terminal Linux
- Conhecimentos em lógica de programação
- Conhecimento básico de linguagem de programaçã
- Programação Orientada a Objetos

# Aula 2: Utilizando Ja

Jevelopment environment

#### **Objetivos**

1. Recursos presentes no Java 11

2. Novidades do Java 11

#### Recursos presentes no J Aula 2 Etapa 1:

Development environment

Default methods

Lambdas

Method references

Streams

Datas

#### Default methods

```
default User findUser(final Statement statement) {
                                                                                                                                                                                                                                                                                                                      List<Statement> findAllByUser(final User user);
                                                                                                                                                                                                                                                                                                                                                                                                                                 return statement.getUser();
                                                                                                                                                                                                                                                public interface StatementService {
                                                                  import com.dio.entity.Statement;
                                                                                                    import com.dio.entity.User;
package com.dio.service;
                                                                                                                                                                            import java.util.List;
```

#### Lambdas

```
